**FOR IMMEDIATE RELEASE:**

### **New Industrial Vacuum DS2720 Slated for Portable, Continuous Duty Extraction**

**HOLYOKE, Ma., November 1, 2006** – Ruwac announces the newest addition to their Powerhouse Continuous Duty Vacuum line, the DS 2720. Rated for continuous pickup of chips, dust, and powders, the DS 2720 maintains clean, dust-free workplaces and protects employee health.

The DS 2720 offers a compact and portable method to continuous, dust-free vacuuming. Featuring heavy-duty self-locking casters, a full handle bar, and durable, fiberglass-reinforced housing, the DS 2720 is easily maneuverable through doorways and elevators, allowing for maximum versatility in applications. This Powerhouse vacuum can be used for vacuum-assist grinding, point of source extraction, abrasive dust collection, and can accommodate multiple operators with extended lengths of hose.

A 10 horsepower motor and twin multi-stage centrifugal turbines produce 506 CFM, generating maximum performance and enough power for the vacuum to be used in central vacuuming systems. Dust-free environments are vital to employee health and productivity in any industry. Equipped with Ruwac's state-of-the-art, extra large filtration system, the DS 2720 is 99.9 percent efficient at .5 micron, and won't return collected dust to the workplace. The innovative dust-release filtration system eliminates premature filter clogging and collects all material in Ruwac's largest foot-lever actuated dustpan, ensuring the greatest filter longevity and reducing vacuum downtime. HEPA filter upgrades are also available for absolute filtration.

A variety of accessories are available. Ruwac will be featuring the DS 2720 Powerhouse along with the rest of their industrial vacuum line at the 2007 World of Concrete in Las Vegas, Nevada. Come see live demonstrations and talk with representatives in booth #S11647.
