**FOR IMMEDIATE RELEASE:**

### **New Filtration Assembly Improves Performance and Productivity**

---

**HOLYOKE, Ma., August 3, 2007** – Ruwac has redesigned the MicroClean filtration system for improved performance and increased productivity for its portable vacuum line. New filtration assembly for dry material allows filters to stay cleaner longer with less built up debris, allowing for reduced maintenance and fewer replacements.

Quick release assembly drops cluttered debris from filter and allows filters to be cleaned more efficiently. Innovative design keeps filter integrity intact to ensure dust-free operation and dustless work environments. Cleaner work environments protect workers' health from dust irritants and fewer filter replacements means fewer costs and maintenance time. New dry-material filter assembly is included with all new vacuums and is available as an upgrade for any existing portable machine for dry pickup.

Ruwac is dedicated to providing the industry with reliable, durable vacuum systems and impenetrable filtration systems. For more information, contact: **Ruwac**, (413) 532-4030, [info@ruwac.com](mailto:info@ruwac.com), or visit: [www.ruwac.com](http://www.ruwac.com).
