FOR IMMEDIATE RELEASE:

Ruwac GV10 Announced for Outdoor, Industrial Use

HOLYOKE, Ma., May 14, 2007 – Ruwac introduces the redesigned portable GV10 Gasoline Vacuum for remote location and outdoor use. The powerful GV10 allows increased productivity in remote locations where electricity is unavailable and accommodates a variety of tooling and accessories for multiple applications. Ideal for bridge or road work, the GV10 is adaptable to pre-separation systems to collect chips and dust with increased capacities.

The 10 HP GV10 is completely portable with heavy duty casters and features a high performance centrifugal turbine with 300 CFM performance. The modular housing design of the GV10 allows for upgrades to electric or air-powered motors, or HEPA modules for absolute filtration. The GV10 features 99.9% efficiency at 0.5 micron with an oversized 28 square foot filter. A newly redesigned maintenance-free filtration system with an improved dirt release function extends filter life and reduces downtime. Featuring an innovative 9 gallon drop-down dustpan, collection capacity can also be increased to 55 gallons. Another modular feature of the GV10, inlets are available in 2” to 4” sizes.

A variety of accessories and options are available. Portable, compact, and extremely durable, the GV10 Gasoline Vacuum provides cleaning power to locations without power. The GV Series and the rest of Ruwac’s industrial vacuum line can be found online at www.ruwac.com. For more information, contact: **Ruwac**, (413) 532-4030, info@ruwac.com, or visit: http://www.ruwac.com/alternative_gas_prod1.html.
