**FOR IMMEDIATE RELEASE:**

### **Ruwac SumpPro™ Lite SPS 35 an Easy Solution to Wet Messes**

---

**HOLYOKE, Ma., May 11, 2007** – Ruwac introduces the smallest of its portable Sump/Slurry line, the SumpPro™ Lite SPS 35 Sump Vacuum. Designed to be compact and completely portable, the SPS 35 is ideal for small wet/dry clean-up applications, chip separation, and general housekeeping.

Small but powerful, the SumpPro Lite features 112 CFM and 107” H2O to quickly remove debris from machines. Equipped with a 4 gallon chip basket and 9 gallon liquid capacity, this vacuum saves time and money by quickly cleaning up small messes and features a coalescing filter to minimize the presence of harmful particulates in the air stream. Emptying is easy with a top access door for collected solids and a 1.5” manual blast gate for liquids. To prevent overflow, a positive float closure assembly automatically shuts off the vacuum when maximum capacity is reached. Fiberglass reinforced housing is rust and corrosion resistant, allowing maximum longevity and cost effectiveness. An optional return pump can be added to the SumpPro Lite to reallocate filtered liquids, letting operators vacuum and pump at the same time.

Ruwac is dedicated to providing their customers with a wide range of portable, central, and specialty vacuum systems suited to fit their cleaning needs. Ruwac’s industrial vacuums are best known for their reliability, innovative design, and superb filtration, yet also offer versatility with modular housing and accessories. With their top quality, long-lasting products, Ruwac ensures clean and safe workplaces in an array of manufacturing industries.
