FOR IMMEDIATE RELEASE:

Portable Vacuum Little Red Announced for Concrete Industry

HOLYOKE, Ma., October 30, 2006 – Industrial vacuum systems manufacturer Ruwac introduces the durable, fully portable, dual motor Little Red WNS 2220 vacuum for the concrete industry. As Ruwac's most compact machine, Little Red is easy to use for picking up both concrete chips and fine powders, and can be adapted for use with vacuum assist tools, pre-separation systems, point of source extraction, or general maintenance.

Little Red is easily maneuverable and capable of moving 200 CFM. Adequate dust removal is necessary for healthy manufacturing processes, air quality and overall health of workers. Little Red's oversized, long-lasting MicroClean filter is 99.9% efficient at 0.5 microns, allowing large quantities of fine material to be collected without loss of suction, and is HEPA-ready for absolute filtration. Loose debris is dropped out of the filter with a newly redesigned, maintenance-free filtration system, extending filter life and reducing downtime. A large drop down dustpan is foot lever actuated for easy and dust-free waste removal. Compression cast composite fiberglass housing will never dent or rust, and a tip-proof design allows for maximum longevity.

A variety of accessories and options are available. Little Red is ideal for any concrete remediation and ensuring only clean air is returned to the environment. Little Red WNS 2220 and the rest of Ruwac's industrial vacuum line will be featured at the 2007 World of Concrete in Las Vegas, Nevada.
