FOR IMMEDIATE RELEASE:

Portable WS Vacuum Line Collects and Contains Fine Powder and Dust

Holyoke, MA., April 2, 2007 – Ruwac’s WS Series of industrial vacuum cleaners feature cost efficient functionality and performance for all cleaning applications. Save time on clean-up with point of source extraction for handheld tools and vacuum-assist sanding. Complete portability makes general housekeeping fast and easy. The oversized MicroClean filter is 99.9% efficient at .5 micron, making it ideal for fine powders and dust collection and containment.

A newly-redesigned maintenance-free filtration system drops loose debris out of the filter, extending filter life and reducing downtime. Oversized filters can collect large amounts without loss of suction and offer a 3 year warranty. Featuring powerful motors the WS Series can accommodate long hose lengths and multiple users, or can be adapted for central vacuum systems, making the vacuums versatile and adaptable to any application with fine powder or dust. The WS Series are adaptable to a variety of vacuum assist sanders and handheld tools, which can lead to greater productivity and a significant reduction of machine downtime. Vacuum assist sanding eliminates dusty work environments, leading to better visual control of tools and safer, healthier atmospheres for workers. Compression cast composite fiberglass housing is extremely durable and a large drop down dustpan is triggered with a foot lever to permit dust-free emptying. All machines are HEPA-ready for absolute filtration and a variety of options and accessories are available.

The WS Series is ideal for loose, fine powders or dust, and ensures only clean air is returned to the environment. For more information, contact: **Ruwac**, (413) 532-4030, info@ruwac.com, or visit: http://www.ruwac.com/intermittent_ws2220.html.
