FOR IMMEDIATE RELEASE:

Wet Vacuum Now Able to Vacuum and Pump Simultaneously

HOLYOKE, Ma., September 21, 2006 – Ruwac has released their WSP 2000-4000 Series Wet Vacuum. The vacuum allows workers to collect wet material for all intended cleanup purposes safely and efficiently. With an optional return pump, the wet vacuum can also vacuum and pump simultaneously for quick reclamation of water from floods, power washing, or fire damage.

The WSP Series Wet Vacuum contains a dual stage bypass motor, and has been specifically engineered to concurrently vacuum and pump. Equipped with a ball valve release for liquid and an 8 inch discharge plate for solid matter, the Wet Vacuum saves time and manpower since it does not need to be lifted to be emptied. The large rear base wheels and front casters make it difficult to tip over, while still permitting mobility. A float assembly inhibits the fiberglass reinforced collection container from overflowing, thus preventing hazardous spills. Keeping materials away from workers and out of open environments protects health and promotes safety on the job.

Ruwac is dedicated to providing their customers with a wide range of portable, central, and specialty vacuum systems suited to fit their cleaning needs. Ruwac's industrial vacuums are best known for their reliability, innovative design, and superb filtration, yet also offer versatility with modular housing and accessories. With their top quality, long-lasting products, Ruwac ensures clean and safe workplaces in an array of manufacturing industries. For more information, contact: Ruwac (413) 532-4030, www.ruwac.com, info@ruwac.com.
