**Ruwac's Red Line Direct Bagging Vacuums** are the ultimate "dustless" solution and a great option when you need a higher level of protection from hazardous dusts. The Bagging Style Vacuum works in the same manner as the Dustpan Style Vacuums except for the materials drop down into a bag rather than into a dustpan. This allows the operator to **never come in contact with the dust** as they can tie off the bag and throw it away.
