

ATTIC VAC-PK

VERMICULITE REMOVAL SYSTEM

FOR FASTER AND SAFER VERMICULITE REMOVAL.

The Attic Vac-PK is an engineered solution for increasing production and minimizing labor costs. The extra long hose allows you to set up containment outdoors eliminating the need to carry heavy bags of vermiculite through the house!

Use our system and start collecting your hazardous materials directly into a 55 gallon collection drum that's lined with a heavy duty plastic bag for convenient and dust-free waste removal. **Less Labor = Less Time**

The Attic Vac-PK Vermiculite Removal System is Ruwac's most popular solution to safely handle loose fill vermiculite, featuring a heavy duty 220 volt industrial vacuum with a powerful 300 CFM @ 150" H2O, 3 motor design.

Utilize 150' of 3" hose with a single operator or run the 3" hose up into the attic and use a "Y reducing Manifold" to use two operators and 2" hose for final cleanup. The days of shoveling are over.

#ATTICVAC-PK

Quick, easy, safe and saving you \$ on every job. Also great for asbestos abatement, mold and lead remediation, demolition, surface preparation and post construction project cleanup.
