

# RUWAC'S Heavy Duty Throttle Upgrade

- Ruwac USA has redesigned and upgraded the throttle cable for all new and existing V1000® / GV10XLT early entry saw vacuum systems. This throttle cable design has been used in the aircraft industry for many years and Ruwac has customized its design to outfit and upgrade any existing units in the field.
- Benefits of new HD throttle upgrade kit:
  - Relocated location for better protection during transportation and operation.
  - Thicker cable diameter and heavy-duty cable sheath for durability and longer life.
  - Heavy duty powder coated steel mounting bracket (reuse existing hour meter and hardware).
  - Locking screw mechanism to provide precise engine operation and RPM.
- The V1000® / GV10XLT is a specially designed gas-powered vacuum system paired with an on board HEC pre-separation system designed for the collection of “green” concrete dust during early entry sawing applications.
